**Instructions on how to create an executable file from my code.**
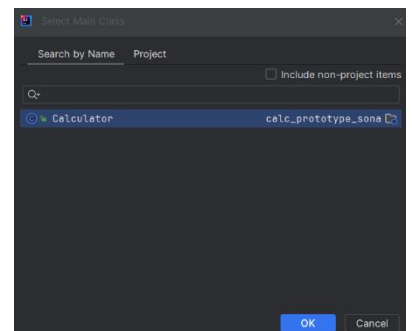

author: Sona Hariharan

version: Oracle OpenJDK Version 24

1. Open the folder 'sona_calculator' in IntelliJ.

2. Navigate to Project Settings by selecting File -> Project Structure.

3. Click on 'Artifacts', then select the '+' icon to generate a JAR file.

4. Select 'from modules with dependencies'.

5. Click on the 'Main Class' text box, select 'Calculator' and press OK.

6. Press OK again to close the window, then select Build -> Build artifacts -> build.

7. Next, open your terminal and navigate to the jar file built. This file will be inside the 'out' folder (sona_calculator\out\artifacts\sona_calculator_jar> ls)

8. Next, type 'java -jar sona_calculator.jar' in the terminal.
